

Pervasive Integration Platform Training: HIPAA Module

Course Objectives

This course is designed to enable a user to begin developing EDI and HIPAA Transformation Maps and Process Designs using Business Integrator. The primary tools used include Document Schema Designer, Document Validator Component, Map Designer and the Process Designer.

Who Should Attend

Experienced Business Integrator users who will be using the software to develop solutions specifically around EDI data structures. This course is generally taken as a follow-up to the Advanced Transformation Techniques course.

Description

One day of instructor-led, hands-on classroom training. It begins by familiarizing the attendees with Document Schemas and Code Sets, and then moves on to begin developing Maps that conform to EDI standards using the HIPAA transaction sub-set. Additional exercises use the Process Designer to manage, split and validate the documents in the context of a larger solution.

Prerequisite

The prerequisite for this course is the Advanced Transformation Techniques course.

Course Content*

This course comprises presentations, hands-on, instructor-led exercises and a thorough explanation of topics. Topics covered include:

- Document Schema Designer
- Creating EDI documents — control segments
- Validating EDI documents
- HIPAA source files: mapping techniques
- HIPAA target files: mapping techniques
- Handling conditional segments
- Handling repeating segments/loops
- Hierarchical structures
- HIPAA solution workflows in Process Designer
