

Advanced Transformation Techniques

Course Objectives

This course is designed to expand the knowledge of a typical end-user, providing participants more robust solutions using additional product functionality. The primary tools used in this course include Map Designer and scripting language, Process Designer and Join Designer.

Who Should Attend

Experienced Pervasive Data Integrator™ product users or those who have completed the Fundamentals course.

Description

One day of instructor-led, hands-on exercises using advanced scripting, Process Designer components, and additional mapping techniques that will enable you to extend into more real-time, message-based integration.

Prerequisite

The prerequisite for the course is the Pervasive Data Integrator Fundamentals course.

Course Content*

This course comprises presentations, hands-on, instructor-led exercises and a thorough explanation of topics.

Topics covered include:

- Engine Execution Profiler
- Repository Manager
- Internal “DJ” object usage
- External Java and COM object usage
- Using message objects in maps and processes
- Using queue components in Process Designer
- Iterators and builders in Process Designer
- Validating EDI & XML documents
- SAP iDoc mapping
- Join Designer
- XML Mapping – Buffered PUTs, PUT Tree
