

# Management and Administration

## Course Objectives

This course is designed to enable you to effectively use Pervasive Integration tools that manage metadata and the execution environment. These tools include: Repository Explorer, Repository Manager, Integration Manager™ and Integration Server.

## Who Should Attend

Lead Technicians, Project Managers, Architects, Programmers, System Administrators and anyone responsible for managing Pervasive Integration metadata in the repository layer, deployment, execution of the run-time engine or data profiling and analysis.

## Description

This is a two-day session of presentations, explanations and hands-on exercises designed specifically to allow the “gatekeeper” of your transformation and integration metadata to efficiently manage, deploy and execute processes.

## Prerequisite

The prerequisite for this course is the Pervasive Data Integrator™ Fundamentals course.

## Course Content\*

This course comprises presentations, hands-on, instructor-led exercises and a thorough explanation of topics. Topics covered include:

- Repository Manager
  - ~ Search and query for metadata
  - ~ Perform impact analysis
  - ~ Propagate changes
  - ~ Create packages for deployment
- Integration Server
  - ~ Installation and Configuration
- Integration Manager
  - ~ Configuration (Database, Servers, Users)
  - ~ Deploy packages
  - ~ Schedule executions
  - ~ Monitor progress
  - ~ Report results
